

Smart RC Fishing Bait Boat Three Hoppers 2kg Load 500m Fishing Surfer Rc Boat

Our Product Introduction

Basic Information

- Place of Origin: Shandong, China
- Brand Name: Sunrise
- Certification: ISO
- Model Number: Y18
- Minimum Order Quantity: 100 Pieces
- Price: 79 USD/Piece
- Packaging Details: Negotiated / Standard Package
- Delivery Time: Negotiated / 20 Working Days After Payment
- Payment Terms: T/T
- Supply Ability: 5000 Pieces / Month

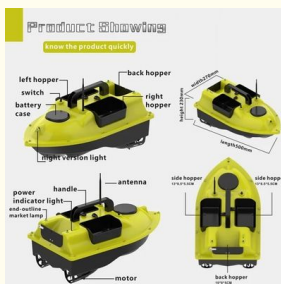

Product Specification

- Product Name: Three Hoppers 2kg Load Fishing Bait Boat
- Color: Green
- Cruise Control System: Automatic Correction
- Distance: 500M
- Load Capacity: 2.0kg
- Material: ABS
- Night Vision Light: Support
- Battery: 7.4V/5200mAh
- Size: 50x27x23cm
- Net Weight: 1900g
- Highlight: Smart RC Fishing Bait Boat 2kg, RC Fishing Bait Boat Three Hoppers, 500m Fishing Surfer Rc Boat

Product Description

Smart RC Three Hoppers Fishing Bait Boat 2kg Load 500m Remote Control

What Do I Need to Look for in a Bait Boat?

Hopper

One of the first things to look at when you're investing in a bait boat is the hopper. This is the area of the boat where you store the bait, so understandably it will play a bit part when you're deciding between two like-for-like bait boats. We have bait boats with lots of different hopper sizes, from boats that can hold 1kg of bait to boats that can hold nearer to 5kg of bait at a time. If you're an angler who likes to get a lot of bait out fast, these are the ideal tools for you. Spods, catapults, throwing sticks, all of these pale in comparison to the ultra-fast and ultra-large bait distribution that a quality bait boat can offer.

You will also be faced with the option of a single hopper or a double hopper. As you might expect, a single hopper allows for a single distribution of bait, dumping the whole lot in one area. This is perfect for the angler who wants to target a key area of a swim as it really helps to concentrate your boilie or groundbait mix – focussing the attentions of the fish and allowing you to really hone in on a specific target. A double hopper splits your bait in two. This allows you to distribute twice in a single trip, dropping half your bait in one area and the other half in another. This is ideal if you're looking to get a spread of bait through the water or if you've got your eye on two different features that you're looking to target. Most dual hoppers will also allow you to release the bait simultaneously, too, giving you a huge range of possibilities when it comes to baiting your swim. The size of your hopper will often determine the size of your boat, which in turn impacts on the run time and maximum speed. Not only will a bait boat of a greater capacity be larger but, more often than not, a bait boat with dual hoppers will often be larger than a single hopper boat. If you're an angler looking to reduce rather than increase the amount of weight you're lugging down to a swim, a smaller single hopper boat that can make multiple trips throughout your session might be the better option than a larger dual hopper boat which can only run for an hour or so before it is out of juice.

Battery Life

Whilst we're on the subject, there is no denying that battery life is incredibly important when you're considering buying a bait boat. Technology has come a very long way since the first days of bait boats and long gone is the need to recharge your boat after each runout. However, these are high-powered machines and, as such, you'll struggle to find one that can survive more than a couple of hours of continuous use. Luckily, you'll hardly ever (if not never) have to run your bait boat continuously for this amount of time, so this shouldn't be an issue with any of the bait boats in our range. If you are someone who enjoys going on longer sessions and you know you'll be re-baiting regularly, it might pay to invest in a bait boat with a longer run time.

As we've said, the size of a bait boat can often make a difference to its total run time. A smaller bait boat is lighter in weight so, chances are, it will take less battery power to get it moving – meaning that it is more likely that a smaller boat will offer a more significant run time. However, this is not always the case, as a smaller boat will also have a smaller battery.

Another thing to consider is the ease of recharging your [batteries](#). Since most angling venues don't have a power supply, unless you take a generator or small power pack down to the water with you it is unlikely that you'll be able to recharge your bait boat on the bank. That said, some bait boats are now compatible with solar panel chargers. This is ideal for the angler who likes to go on long sessions and it allows you to keep your bait boat topped up with power throughout your session.

Range

Almost all of the bait boats in our range will be able to run further than the average caster and most will have a range in excess of 200m (almost 220 yards). If you are someone who is regularly casting on the edge of this, it might be an idea to plump for a bait boat that offers a slightly further range – giving you the peace of mind that you need to ensure that you won't lose your expensive boat due to steering it out of range.

Some bait boats are fitted with devices which ensure that they turn around, should they ever lose signal from your controller, too. When you're looking at the range of your bait boat you might also want to bear in mind some of the other features that the bait boat can offer. If you're getting a bait boat with an in-built echo sounder or fish finder system, it might impact on the range that the boat can reach. This isn't always the case, however, and most modern echo sounder systems can operate as far as the bait boat itself.

Bear in mind that many bait boats are fitted with hook-release systems, too. These allow you to attach your hook to the outside of the bait boat, releasing it in tandem with your boatful of free offerings. If you are using the bait boat to drop your hook as well as your bait, it will serve you well to remember that you still need to be able to land any fish you hook! Takes at an extreme range, especially if you're not used to them, can often result in lost fish.

Propulsion

The force which moves your bait boat through the water is significant. Not only do you want to ensure that you're making as little impact on the water as possible – after all, you don't want to scare away the carp you're valiantly trying to target – but you also want to avoid the risk of tangles. This is why most bait boats are now fitted with jet pumps, rather than traditional propellers.

Jet pumps ensure that your bait boat moves through the water with minimal disturbance, as they are also less likely to tangle on weeds, enabling you to target shallower waters with more confidence. However, you will still find propellers on some of the bait boats we stock. This is because propellers require significantly less energy to get going and keep moving – extending the battery life of your boat by an impressive margin. High-quality bait boat manufacturers will also keep the weed issue in mind when designing their propulsion system and many propeller-driven boats now come with inbuilt weed guards.

Lights

As many carp anglers will know, more often than not the best time to target the water is at dawn and dusk. This will leave you with the unfortunate scenario of baiting your swim darkness (or near to). Luckily, many of the bait boats in our range take this into account and are fitted with LEDs. Although these lights might not do a great job of guiding your way (you'll have to rely on your head torch or another lighting solution for that), they do give a clear indication of the whereabouts in the water of your bait boat.

Most bait boats will have different coloured lights on the front and back, so you should always easily be able to tell which way your boat is facing. It is important to bear other anglers in mind when you're using the lights on your bait boat, as some might

find the bright lights annoying or distracting to the peace and tranquillity of the venue, so do only flick your lights on when you really need them.

Increase the Quantity of the Hopper Designed with the Hook Doffing

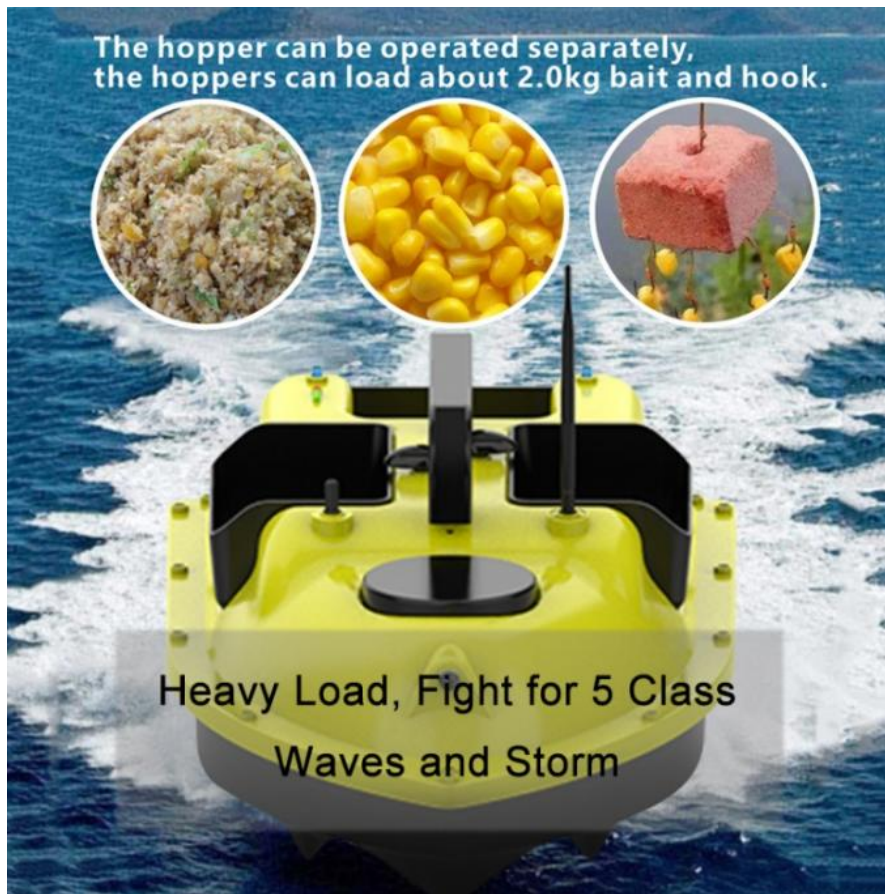

two hoppers are for the bait
one hopper is for the hook doffing

ABS engineering plastics material
non-toxic and tasteless
impact resistance and high resistance to wear

The propeller is designed with cover,
can protect the propellers from the
water channel sundries
